

Solving for Sustainability in Business

Sonata in collaboration with Microsoft,
empower clients in their sustainability efforts

Corporates face pressure from stakeholders, regulators, and customers to report and manage their environmental, social, and governance (ESG) impacts. Regulations like the EU's Corporate Sustainability Reporting Directive will soon require over 50,000 organizations to report on emissions and social impacts. Similar regulations, such as the UK's Sustainable Disclosure Requirements, are emerging globally.

Digital technologies can help organizations track and manage data at scale to report their sustainability impact accurately.

Returns on Sustainability Investments

By investing in digital sustainable measures, your organization can:

Save Cost

Sustainability reduces costs and can affect operating profits by up to 60%.

Enhance Performance & Productivity

Companies with sustainable and inclusive cultures tend to have 27% higher profitability and 22% greater productivity.

Boost Customer Loyalty

88% of customers will be more loyal to a company that supports social or environmental issues.

Improve Shareholder Value

Companies that excel in sustainability and ESG practices tend to outperform their peers in shareholder returns.

Microsoft Cloud for Sustainability: Your ESG Solution

Microsoft Cloud for Sustainability represents a growing set of ESG capabilities, built on Microsoft Azure and powered by the Power Platform. It delivers unified data intelligence and effective strategies to create sustainable IT infrastructures, reduce environmental footprints, and build sustainable value chains. Here's how it makes them possible:

Data Integration

The solution enables seamless data collection from various business systems, breaking down silos and standardizing information into a comprehensive ESG data estate.

Performance Tracking

With tools like Microsoft Sustainability Manager, companies can capture, calculate, and report sustainability performance efficiently.

AI-Driven Insights

Leveraging AI/ML and advanced analytics, organizations can identify opportunities to reduce emissions, waste, and water usage, thereby enhancing operational efficiency.

Tailored for Every Stage of Your Sustainability Journey

Our solution is designed to adapt to your needs, regardless of your sustainability data maturity.

Level	Sustainability Data Stage	Microsoft Solutions
Emerging	Non-integrated, decentralized data in silos/partially in data lake	<ul style="list-style-type: none">• Sustainability Manager• Power Apps• Power BI Premium• Azure Synapse• Azure Data Lake• Azure ML/Cognitive Services• Data Governance (Purview)
Hybrid	Data not integrated into enterprise strategy, not on Azure	
Advanced	Data integrated into enterprise strategy, on Azure	

* Microsoft Sustainability Manager unifies data intelligence by capturing, calculating, and reporting sustainability performance and identifying opportunities to reduce their environmental impact.

Along with Microsoft, Sonata is uniquely positioned to address the critical needs of ESG reporting, adhering to the Scope 1-3 emissions, selection of Sustainable Technologies, and other sustainability initiatives. Collectively, we bring expertise in developing Sustainability Scores and addressing your green chemistry and life cycle assessment needs. Together, we leverage sustainable technologies to optimize energy usage, minimize environmental impact, and ensure compliance with global sustainability standards. This partnership empowers organizations to drive impactful change while enhancing operational efficiency and long-term resilience in their sustainability journey.

Why Invest Now?

Our solution is designed to adapt to your needs, regardless of your sustainability data maturity.

Cost Savings

80% of leaders indicated sustainability programs help optimize and reduce costs.

Resilience Against Disruption

86% of leaders say sustainability investments are protecting their organization from disruption.

Innovation Driver

Sustainability initiatives often lead to process improvements and new business opportunities

The Sonata Advantage

Sonata's ESG team is a seasoned and reliable partner, expertly guiding projects focused on strategy, diagnostics, and the reporting and monitoring of ESG indicators.

With our extensive partner network, joint IP investments, and global reach, we are well equipped to deliver timely sustainability solutions to a broader client base.

Our partnership offers cutting-edge tools for managing supplier data, including the collection, analysis, and tracking of ESG performance. Features encompass supplier self-assessments, audits, scorecards, and ratings.

Certifications, Awards, and Recognitions

At Sonata, we prioritize excellence and sustainability in everything we do. Our commitment to quality is reflected in our adherence to industry standards.

IGBC Platinum Certificate

IGBC Green Interiors (New Interiors)
#G1233397 in Bengaluru office for energy efficiency, occupational safety and wellbeing.
