Migrate from **Azure Synapse** to **Microsoft Fabric** Seamlessly with **Sonata**

With our Synapse Migrate accelerator, migration to Fabric gets easier, faster and less expensive.

Enterprises still relying on Azure Synapse face growing challenges in keeping pace with the demands of modern, AI-driven business. Its separate services for data engineering, analytics and governance create additional integration effort and higher licensing costs. Scaling workloads is also complex, particularly with dedicated SQL Data Warehouses, since the Lakehouse concept did not exist in Synapse. Combined with limited native AI and conversational BI capabilities, these challenges drive up operational costs in multi-service deployments and slow the path to real-time insights.

Why migration matters now

While Synapse and Azure SQL have served enterprises well, Microsoft has shifted its strategic focus to Fabric. Early adopters of Microsoft Fabric are gaining agility, scalability and AI-powered insight, outpacing competitors still anchored to Synapse.

What makes Fabric a game-changer

1 **Unified data foundation with OneLake**
Consolidate data warehouse (DW), Data Lake, Lakehouse and real-time intelligence (RTI) into a single open storage format.

2 **Cost optimization with CU Pricing**
One common compute across data engineering, DW, Power BI, RTI, etc., reducing DW workload costs by 70%+ for many Synapse users.

3 **AI-led productivity**
Engineering Copilot + Sonata's accelerators cut engineering and maintenance costs by 40%+.

4 **Improved agility**
Unified shortcuts, lakehouse and RTI deliver instant insights for fast-moving businesses.

5 **Empower business users**
Enable AI-powered self-service analytics to generate faster, actionable insights.

6 **Cross-platform data unification**
With data mirroring and cross-cloud shortcuts, Fabric enables a unified 360° view of enterprise data, making it faster and more cost-effective to build high-value use cases like Customer 360 and Product 360.

Why Sonata is your ideal migration partner

As a trusted **Microsoft Fabric featured and launch partner**, Sonata is uniquely positioned to make this transition seamless.

Tooling-based discovery and assessment
We identify the best migration approach, evaluate compatibility and conversion efforts and reduce the overall risk, cost and time of migration.

Migration Accelerators
Our reusable components and frameworks significantly shorten migration timelines and lower costs.

Sonata-Microsoft partnership
30+ years of partnership and 3,500+ experts trained in Microsoft technologies.

Our proven assessment and migration framework – coupled with proprietary accelerators – helps organizations migrate from Synapse to Fabric seamlessly, just as we did for a leading global perfume brand.

Client success story

Business case + solution

A leading perfume house struggled with fragmented data and ad-hoc reporting bottlenecks.

Sonata migrated their Synapse warehouse and BI marts into Fabric's OneLake, integrating Dynamics 365 data seamlessly.

Result

- Data compression: 60% of NPD sales data by storing it in delta parquet
- A single source of truth
- AI-powered self-service insights via Power BI and Copilot
- Reports delivered in minutes instead of days, enabling faster, smarter decisions

Our Synapse migrate benefits

30-40%
cost reduction
TCO – engineering

30%
faster time
to market

50%+
Automate ad hoc reporting with AI-led, self-service analytics

Real-time
analytics for agile
decision making

Readymade
framework for
business 360

Unified
governance and security across the data platform
